or email info@pai.ie

About the course

PAI's Advanced Data Protection Officer programme offers learners a pathway to an accredited Data Protection Officer Certification. Building upon our Level 1 award, the Advanced programme is essential for all Data Protection professionals, and moves from basic principles and protocols to assessing how Data Protection rules are evolving internationally in line with EU Data Protection Regulation and a new focus on Internal Data Governance, increased penalties, and an emphasis on managing and mitigating risks of poor privacy outcomes for individuals.

Designed with our Data Protection partners Castlebridge Associates, our Level 2 programme presents a coherent framework for Data Protection Officers to understand how their roles align with Data Governance, Information Quality, and the existing frameworks and disciplines which can be used to develop robust and evidence based Data Privacy Governance in your organization.

The course syllabus assumes a level of prior knowledge of Data Protection laws, and is aimed at supplementing knowledge of legal rules with frameworks and methods for Information management to meet or exceed legal requirements.

Learning Outcomes

Upon completion of this Advanced Module learners will:

- Understand Data Protection in a Risk Management model under the GDPR;
- Understand why the Risk-based approach differs from the historic model of compliance under Directive 95/46/EC;
- Apply the Fundamental Principles of GDPR and how they relate to the Privacy by Design philosophy;
- Understand what is meant by "Privacy Engineering";
- Be familiar with Data & Information Governance Principles;
- Understand how a Data Governance framework can enable a DPO to better engage stakeholders;
- Have learned how to effectively Conduct A Privacy Impact Assessments; and
- Understand the role of Ethical Information management in PIAs.

Certification

This course will be assessed by a single assignment after the completion of the taught element.

Speakers

Daragh O'Brien — Castlebridge Associates

Daragh O'Brien has almost seventeen years' experience in Data Quality and Data Governance roles across a variety of industries. He spent a number of years in roles with operational responsibility for Single View of Customer strategy and regulatory governance in the telecommunications sector. He is a strong strategic thinker, with a focus on improving how people in organisations can use data and information more effectively to improve the bottom line, society, and personal satisfaction. Daragh has contributed to Irish Government policy development on data protection and data governance, and freedom of information. He is also a regular media commentator in Ireland and internationally on data management related issues.

Katherine O'Keefe — Castlebridge Associates

Katherine O Keefe is a Data Governance and Data Protection Consultant and Trainer with Castlebridge Associates.
